Residual Termiticide

# Termidor® HE

Residual Termiticide

## Safeguard your safe haven from termites

Don't let termites destroy your most valuable asset. Protect your home with Termidor – the household name in termiticide that has been working for homes across Australia for over 21 years. Termidor is recognised as Australia's best and most effective Termite treatment.

### A new level of convenience

Termidor HE is an advanced formulation of the same extremely powerful active ingredient that has made the original Termidor products the most trusted and effective termite treatments.

Termidor HE spreads much further through the soil than older treatments to create a more even and effective protective zone which termites cannot avoid.

Termidor HE binds strongly to organic matter in the soil and, as long as the soil isn't disturbed, stays in place for years. So it's not just superior protection at the start, it goes on providing the highest level of protection year after year.

**Conventional treatments** have limited movement and often lead to an uneven distribution in the soil.

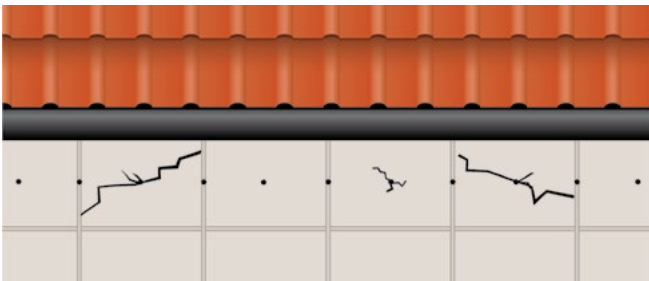

**Termidor HE** treatments spread more evenly through soil – providing a uniform, more effective protective zone.

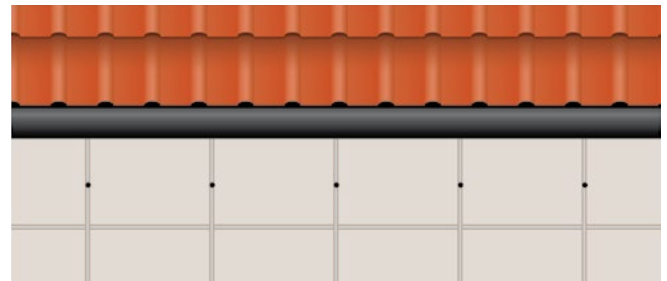

## Less disruption, more protection

The advanced technology in Termidor HE allows pest control operators more scope to provide you a superior treatment to the Australian Standard, without cutting corners or damaging the aesthetics of your home.

Termidor HE significantly reduces the need to drill through tiles, so that treatments can usually be made without unsightly drill holes. Termidor HE also provides for additional vertical spread through soil, resulting in an improved protective zone and reducing impacts to landscaped and garden areas.

**Conventional treatment** often require holes to be drilled through tiled or paved areas, resulting in unsightly damage and distribution.

**Termidor HE** allows for applications to be made more discreetly (eg. in grout lines) meaning a thorough treatment may be performed with minimal impact or damage.
